Functionalities have to be tested by three implementers before release

Comment/Feedback/Suggestion

It would be useful to have a matrix of which country is using each module/feature/API

we are doing a mapping of the implementations - we decided yesterday in the IC to collect this info as well.

Need stage how can we put these into action and how can we engage people?

To masterize the health domain before extending to many domains: the health is the basis, it must be strong
