Project summary

The objective of this project is to adjust openMIS to manage the voucher program within the Republic of Moldova. The primary aim is to reduce unreported employment by implementing a voucher system. In this project's context, a "voucher" represents a form of compensation for labor carried out by agricultural workers.

System roles

**An economic unit
that has the
capability to
purchase and
assign vouchers to
day laborers**

Employer

**Day laborer to
whom vouchers
can be purchased
and assign**

Worker

**Administrative role
who has the
capability to verify
whether Day
Laborer has active
voucher**

Inspector

Core functionalities

Worker registration
