OpenIMIS Initiative – Coding A Global Good

	IMAGE	NARRATION
Context		
1	A global spinning with people and getting connected with ….	More and more countries are moving towards both Universal Health Coverage (UHC) and Social Protection (USP) for their population with the goal of leaving no one behind.
2		Given the many stakeholders involved in health care and their interactions, health care systems are extremely complex, resulting in large amounts of data. To ensure sustainable health financing, the systems must be robust and able to process the financial flows.
3		Filling claims and verifying clients is just as daunting and tedious … Finding a solution for those problems that is both efficient and affordable for countries is not an easy task
		But OpenIMIS might just be the solution for you! What is OPENIMIS? Great question!
What is openIMIS?		
		OpenIMIS is the first open source software supporting the management of social (health) protection schemes...and linking beneficiaries, providers and payer data. It is a powerful tool to strengthen strategic purchasing of health services and digital processing of health system data.
		openIMIS is free to download… customize… and share
		Its compatible with various schemes and interfaces for data exchange. It easily adaptable to the stakeholders needs.
		It is a sustainable initative driven by the openIMIS community that promotes exchange at the global level.

History and evolution	
	Let's take a look back at how it all started….. Seeded in Tanzania in 2012, it is growing into something bigger to be shared with all across the world
Show map of Tanzania with institutions popping as they are named. Show the acronym on screen only when names are said (IMIS), SDC, Swiss TPD; CHF	Back then the Swiss Agency for Development Cooperation , Swiss TPH along with the Microinsurance Academy and Exact Software developed an Insurance Management Information System to operate community health funds in several districts of Tanzania.
Globe zoom out of Tanzania Zoom in on cameroun, with date and new partners showed with arrows migrating into Cameroun	In 2014, the program expanded to Cameroun, with a mutual health insurance adapting the software.
Zoom out of cameroun Map rotating Stop in asia --> zoom into Nepal	And since 2015, the German Development agency (GDC) has been providing support to customize IMIS for Nepal's health insurance schemes.
Zoom out of Nepal The globe is spinning, a computer pops from the globe and centers at its core with arrows floating around the different part of the world to show the spread of the software as an open source. Emphasis on people/silhouette popping and taking the software in .	IMIS has grown organically and has demonstrated potential for easy adaptation to different types of health financing mechanisms needed for UHC. In 2016, GDC and SDC invested jointly to make IMIS an open source application. In 2018 **openIMIS** was born!

How does Openimis work?	
Man thinking? Then a demo video on a computer appears+ We can show the easy infographic	So how does openIMIS work? **openIMIS** has a front-end interface that allows for quick registration procedures even in remote rural areas and can be used **online and offline**.

	Show how two users are using it on their phone and pc	It possesses a modular and adaptable design that covers that following business processes: • Enrolment and contribution collection • Beneficiary verification • Claims management • Client feedback • Data analytics and reports
		We serve as a bridge between the health facility systems and the health care facilities, to facilitiate the process of claim filling. Ehealth is still at it inception but presents great opportunities for the sustainability of health care systems.
The iniative		
	Landscape with all the partners	The **openIMIS Initiative** promotes the open source approach aligned with the [Principles for Digital Development](#). It is a collaborative mechanism that proactively engages members donors, multilateral agencies, countries, as well as the private sector, civil society, foundations, global initiatives and networks.
		The SDC and BMZ are the initial funders. The initiative is coordinated by the GIZ.
The community		
		The **openIMIS** Community supports knowledge sharing both of the software itself and of its implementation by users. The community engages diverse expertise across disciplines and shares best practices. This promotes sustainability, capacity development and technical assistance to in-country specialists.
Conclusion		
		Last but certainly not least…. Did we mention it is contributing to achieve the SDGs?

| | | OpenIMIS is contributing to the agenda2030 of leaving no one behind by addressing SDG1 and 3.

It is the tool to make your ambitions a reality! |
| | | OpenIMIS makes health care management systems easier for you! |
