1 LOGO

2 COLOURS

3 VARIATIONS

4 POSITIONING

1. LOGO

horizontal

vertical

At the centre of the **openIMIS** logo, we can see a stylized human figure. The figure is surrounded by the different data sets, which are provided by openIMIS.

Different shades of petrol symbolize the various sources accessed by the tool.

Message:

openIMIS protects the patient

Considering future brand extensions, it is possible to vary size and range of the data sets to create additional, but familiar visuals.

Logo Configuration

The openIMIS logo can be used **horizontally** as well as **vertically**.

*Apart from the given vertical and horizontal configuration, the logo **cannot be altered**.*

Logo Type

The typefaces used for the openIMIS logo are **Proxima Soft (thin)** and **Proxima Soft (bold)**. *

** Copyright regulations only apply to typeface use in the logo. If used otherwise, individual terms of use should be considered.*

The openMIS logo consists of **four different shades of petrol**.

Further, it can be used in **grayscale levels** as well as **monochromatic** (positive/negative)

*Considering future brand extensions, it is possible to introduce **further colour schemes** as well.*

3. VARIATIONS

Colour

gray scale

black and white

negative

4. POSITIONING

top-left

top-centre

The **horizontal** openIMIS logo should always be aligned left on the given layout.

The **vertical** configuration of the openIMIS logo should always be centred on the given layout.

Sufficient margin should be guaranteed to either side of the logo. In general, the side margin should be at least the size of the graphic. While top/bottom margin should be at least $1/2$ the size of the graphic.

Backgrounds and Contrast

Sufficient contrast to the given background should be guaranteed at all times.

In case of especially dark, light or colourful backgrounds, the use of the monochromatic logo versions is recommended.
