

## The Digital Public Good for Universal Health Coverage and Universal Social Protection

openIMIS is built to manage business processes of health insurance and social protection schemes. openIMIS allows institutions to manage their internal business processes of scheme design, beneficiary management and provider management. In addition, openIMIS also eases the process of generation, submission and the review of claims for reimbursement from service providers. All the data regarding the scheme, and its operations are available in openIMIS to cater to various data analysis needs.

Would you like to contribute to this global community that supports Universal Health Coverage and Universal Social protection through digitalization? If so, please Join the openIMIS Initiative.

You can engage as:

- an implementer
- a scheme operator
- a software developer
- a development partner
- or an academic institution.

# KEY FACTS

## The openMIS product

- Is a global good, which is free to download, customize and use by anybody.
- It is supported and constantly improved by a global community.
- Ensures all data remains with the institution using openMIS.
- Is suitable for use in areas of poor internet connectivity.
- Follows the international HL7 FHIR standard for data exchange, ensuring better interoperability with other IT systems.

## The openMIS Initiative

- Ensures open access to the openMIS software, its documentation, capacity development materials, and demos
- Facilitates opportunities to exchange with and learn from the various implementations of openMIS worldwide
- Engages with other digital public goods, interested users of openMIS, development partners, software developers, and academia to build a strong community of practice around openMIS.

openMIS supports the administration of various social health protection schemes that cater to both the formal and informal sectors in low- and lowermiddle income countries. Currently, openMIS is used to manage various contributory and non-contributory social protection schemes such as health insurance, employment injury insurance, unconditional cash transfers, and voucher schemes.

openMIS is a versatile open-source software which supports the management of health financing and social protection schemes. It is specially designed to manage complex, high-volume data flows which are required to operate such schemes by seamlessly integrating beneficiary, provider and payer data.

Millions of people in various countries in Asia and Africa benefit from health insurance, employment injury insurance, cash transfer and voucher schemes managed by openMIS.
