

LET'S CLOSE THE DIGITAL GAP FOR HEALTH FINANCING!

openMIS is an open source platform which helps to manage health financing processes.

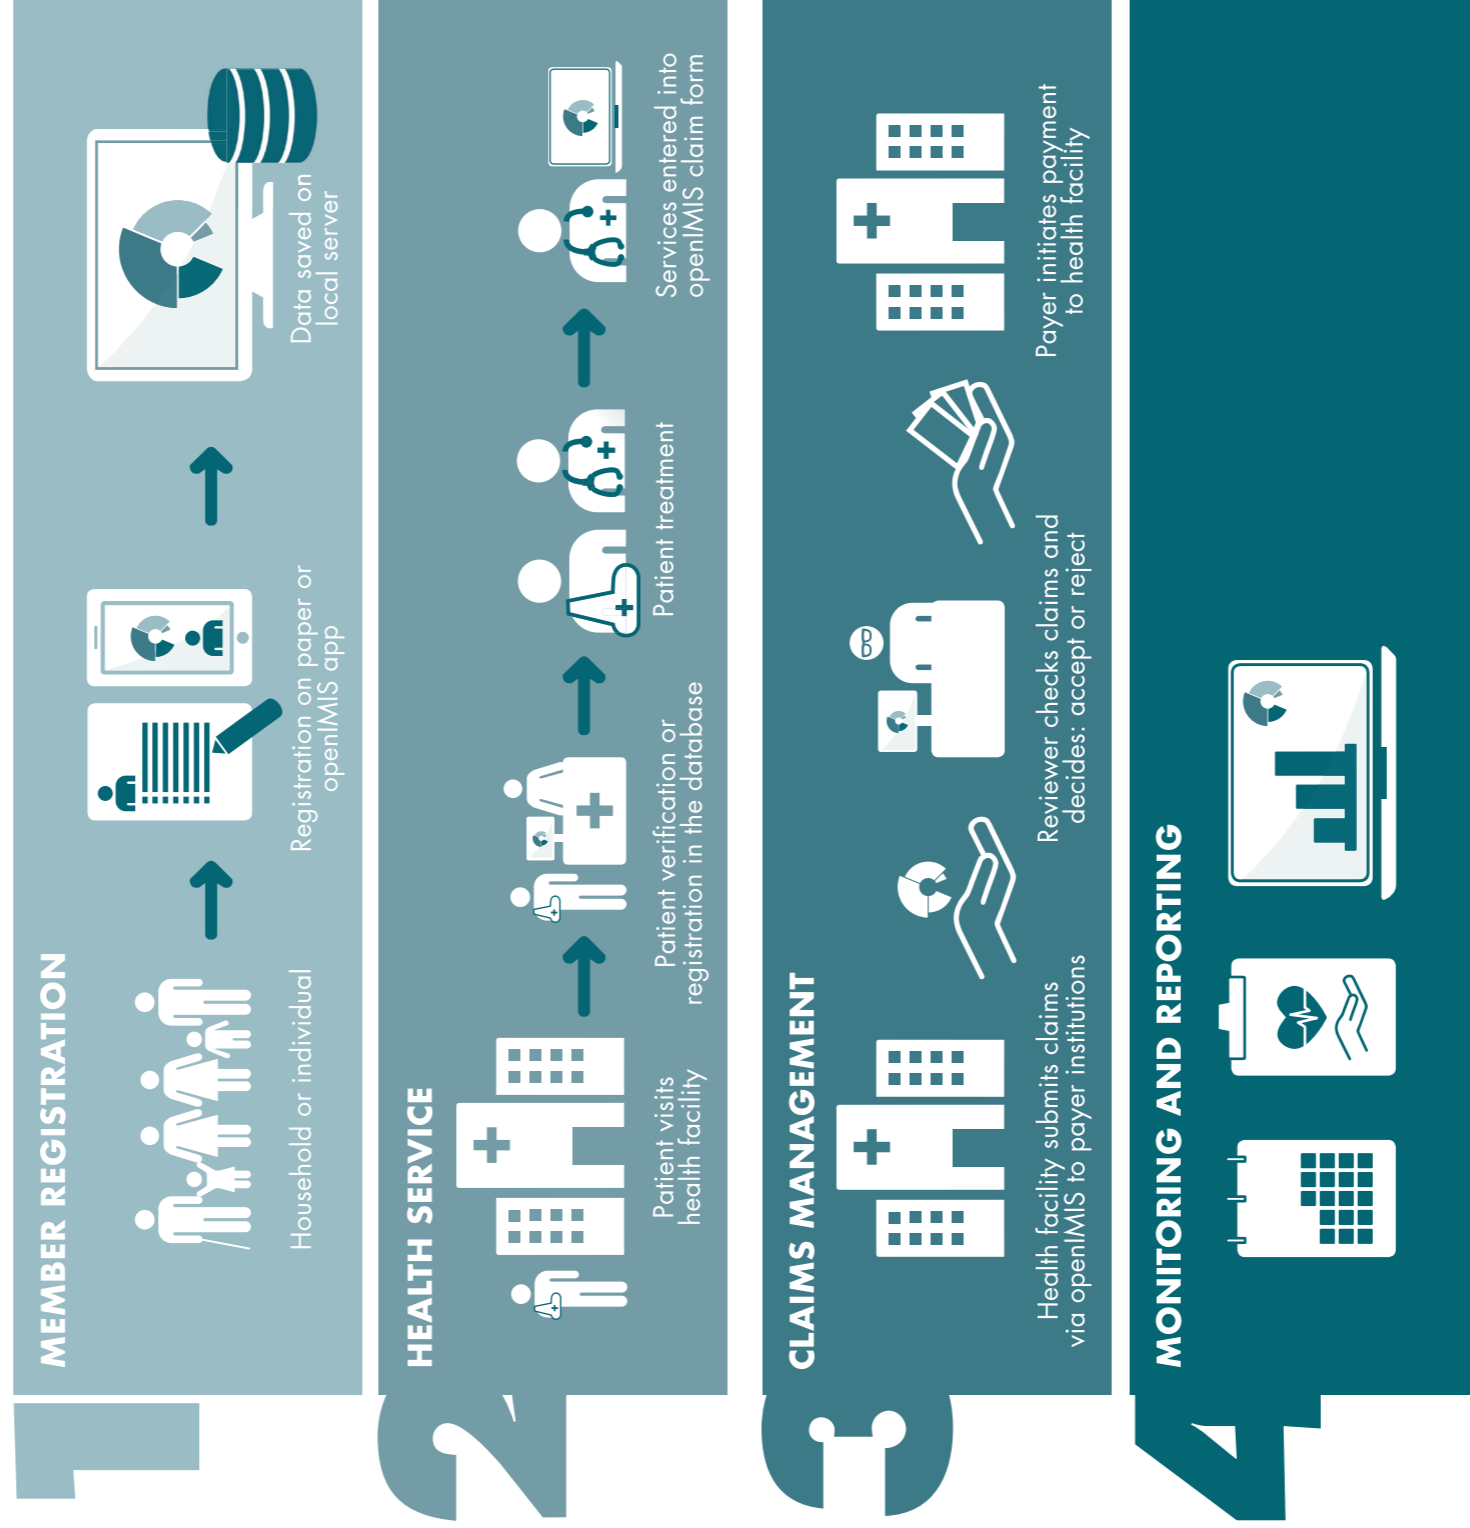

Seamless integration of stakeholders.

Paperless.

Free.

THE BENEFITS

- Digitize paper work
- Avoid cumbersome excel tables
- Save resources. No need for commercial software
- Benefit from a global good

WHO SHOULD USE IT?

The users of openMIS are institutions paying for health care, e.g. health insurance funds or ministries of health.

The software helps to manage:

- Membership/patient registry
- Benefit package (services and prices)
- Contracted providers
- Service claims and reimbursement
- Client feedback
- Monitoring and reporting

STRATEGIC PURCHASING MADE POSSIBLE

openMIS is flexible and customizable for health systems moving towards UHC and strategic purchasing of services.

By linking patient and provider data, it allows digital information flow and processing.

openMIS can be used for

- Health insurances schemes
- National Health Systems (tax funded)
- Output based financing: RBF and P4P
- Voucher schemes
